

Vertique™ Picking Software — VPS™

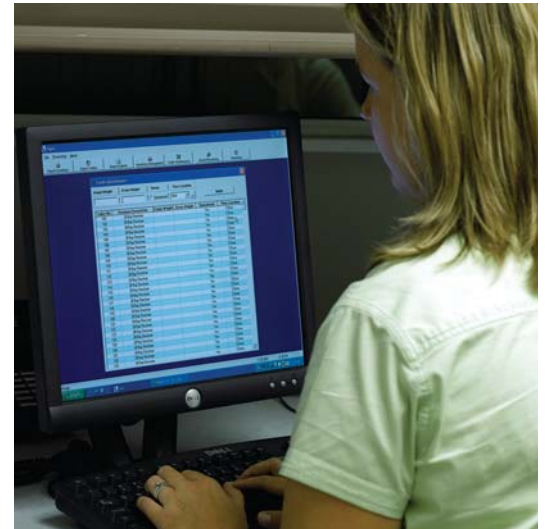

software

The right information. Right at your fingertips. Introducing VPS™ picking and loading software.

With it, you can now manage and move your inventories more productively and profitably than ever before.

Developed by Vertique Inc., this proprietary software was designed for use with Vertique™ automated and semi-automated systems, yet it can be interfaced easily with other existing systems.

It provides valuable data that helps improve your picking and conveying efforts, and lets you achieve a faster return on your investment.

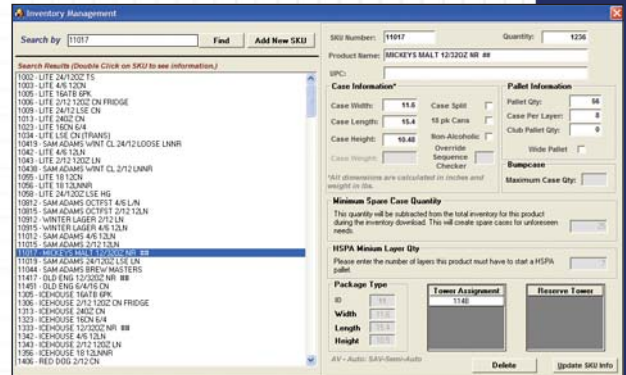

VPS Advantages

- Interfaces with existing routing and scheduling software for seamless interaction with your existing operation
- Sorts orders based on specific customer requirements and delivery routes
- Creates pallet pick sheets to optimize bay size and truck utilization
- Provides reporting tools for efficient picking and truck loading operations
- Provides real-time data that helps:
 - assure timely, error-free order dispensing
 - promote extremely high order picking rates
 - coordinate and manage inventory
 - “build” pallets and/or carts by stop for greater accuracy and more efficient loading and delivery

Vertique™ Picking Software — VPS™

Custom-Built Solutions

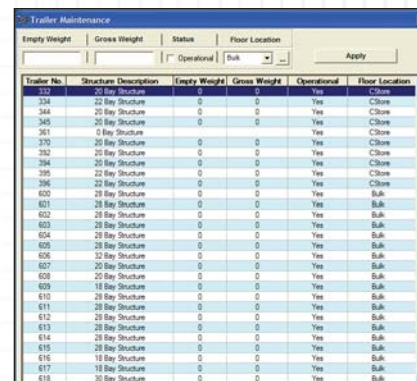

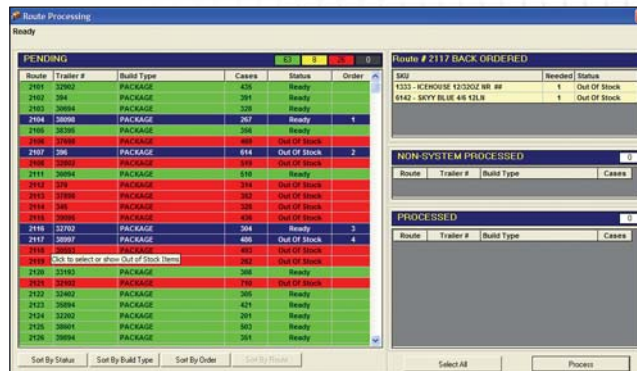

Not only does our VPS software help you achieve tangible results, but it is custom designed to interface easily with your existing system. Its base technology can be seen in all of our software deployments, however, each VPS software package is set up with the custom options you need for your specific operation.

VPS Specifications

Compatible with all standard order processing and truck routing software

Turn-key Solutions with 24/7 Support

And, because we are a total-solutions system provider, Vertique will help you with sales, engineering, installation, debugging, and support. We provide training for you and your staff with our own in-house people, and we have a complete support team available to you 24/7. We even set up each software system with either dial-up or Internet capabilities. That way, if you have a problem, we can get online and help you solve it immediately!
